RE: Finger Scanner Program

We are excited to be implementing a finger scan program at all elementaries and middle school this year. We have been utilizing the finger scan program at the high school for over a year and has been very successful in getting our students through the lunch line, allowing more time to enjoy their lunch. We will be registering students at all schools during open house.

The finger scan program takes a scan of a student's finger. It is converted into a bar code, unique to that student and is attached to their Meal Majic account. When the student comes to the lunch line, he or she simply places their finger on the scanner to be recognized and the account is charged for that meal. It saves time looking a student up and ensures each account is being properly charged. Scanners are cleaned between each class with an alcohol wipe. Once a student has been registered, the scan will follow them through school. It is not mandatory that a student registers as they can still be found in Meal Majic with their student ID or by looking them up by name.

- **Frequently Asked Questions:**

- 1. Is my students fingerprint stored?**

No, there is only a scan of the finger and is converted into a bar code

- 2. What is done with my students fingerprint after the finger is scanned?**

There is no fingerprint. The scan converts into a bar code at that time

- 3. Is the finger scan program safe?**

Yes, when a student is registered with their scan, it is converted into a Bar code. There is no fingerprint ever stored. All health and safety Precautions are taken. Each scanner is sanitized after each class with And alcohol wipe to ensure a clean scan.

This institution is an equal opportunity provider.
