

The School District of Newberry County implemented Office 365 for student email for all students. Students will log in using their network id and an assigned password. For example, Joe Smith would log into email using jsmit0123@sdnc.org and his password. Students will not be allowed to change their password.

To be in compliance with the Child Internet Protection Act and help protect our students, email will be filtered through the same email filters as our District staff. An email structure will be implemented to prevent students in high school from emailing students in middle or elementary schools; middle school students will not be able to email high or elementary students and elementary students will not be able to email high or middle school students.

The link to the web-based email will be found on the School District website as well as the school websites. In addition to email capabilities, Office 365 allows students to store documents online. This will give those students with internet access at home, (or on their phones/tablets/laptops), the ability to log into their email while not at school to access projects that they worked on at school. Office 365 Onedrive comes with access to online Office applications such as Word, Excel, PowerPoint, and Publisher. They also have a login to Google which gives them access to Google Drive and Google Suite (no email).
