

I'm using an Adobe PDF document for my example.

- 1.) Two finger tap (right click) on your trackpad
- 2.) Select **Open With**, then
- 3.) Select **Other**

Another window will open.

- 4.) Select **Applications** from your left menu.
- 5.) Then browse to the App you want to use to open the file, i.e. **Adobe Acrobat Reader**.
- 6.) Check the box "**Always Open With**"
- 7.) Next click **Open** – That's how you associate a file type with the correct application.
