National Geographic Pilot Debrief

April 8, 2020

1:30-2:30pm

Anna Taplin , RV	Mini Doonan, ICOE	Kim Huizar, LP
Carla Eckland, BES	Nancy Thornburg, BES	Karen Marshall, RV
Jennifer Morales, RV	Nicki Westbrook, RV	Steve Holland, BES
Kathy McLaren, BES	Randee Arcularius, RV	Ilissa Twomey, ICOE
Kelly O'neill, BES	Trisha Wallace, BES	Tracy Magan, BES
Krista Maloney, BES	Wayne Linse, BES	

Breakout Meeting Conversations and Notes:

- A. Are you in favor of extending the pilot to Fall 2020 or do you have enough evidence/information to make an informed recommendation at this point?
- B. What components of National Geographic did you use? What was useful? Not necessary?
- C. Anything else?

Breakout Room #1

- Good accessibility
- Nat Geo is better than amplify
- Was not aware about the money aspect of things and possible need to adopt soon. General worries about money.

Breakout Room #2

- Would be interested in extending the pilot
- Spanish - level of spanish is good for the students
 - Readability is on target for grade level
- Illustrations are very captivating
- Videos are great and ability to read with the text
- Some concerns:
 - Kits - not very good instructions (in kit or book)
 - Possibly not every item needed in the kit
 - Online navigation is difficult, publisher may need to streamline

Breakout Room #3

- Rich photos and text
- Kits were good (especially for K)
- Concerns:
 - Depth, especially for the upper grades. Upper grades needed to supplement the text to make sure there was a good foundation before introducing a new unit.
 - Several people agreed with this (see the comments)

Breakout Room #4

- Great photos and good accessibility
- Lesson prep and lesson time was more consistent

- Concerns:

- Technology - needed more training with Nat Geo online
- Textbooks - might not need the entire class set
- Depth - material needed to be supplemented

From Mini Doonan to [Everyone](#): 01:40 PM

A. are you in favor of extending the pilot to Fall 2020 or do you have enough evidence/information to make an informed recommendation at this point?

From Tracy Magan to [Everyone](#): 01:40 PM

I am in favor of extending the pilot.

From Mini Doonan to [Everyone](#): 01:40 PM

B. What components of Nat Geo did you use?
What was useful? Not necessary?
C. Anything else?

From Randee to [Everyone](#): 01:40 PM

I am in favor of extending the pilot.

From Kim Huizar to [Everyone](#): 01:41 PM

No strong feelings either way; I'd be ok extending or stopping here

From nthornburg to [Everyone](#): 02:06 PM

I agree with Randee. I did Earth Science. With the first couple lessons I had to give quite a bit of background about the Earth.

From Kathy McLaren to [Everyone](#): 02:08 PM

I also agree. I would have to supplement Nat Geo quite a bit. I did not feel the rigor was there. I also thought the lesson plans were not laid out clearly.

From Trisha Wallace to [Everyone](#): 02:09 PM

For the unit I had started, it was very repetitive every lesson. I also had trouble with a lot of the video links not working.

From Kathy McLaren to [Everyone](#): 02:10 PM

I also had trouble with the pop-ups and videos working.

From Steve Holland to [Everyone](#): 02:11 PM

The video links are better now than 3 weeks ago.

From Kim Huizar to [Everyone](#): 02:11 PM

B. For K I used the Big Books, a little bit of the videos, the students made the science notebooks described in the TE, and the kit materials for one of the engineering activities. These were all useful. I didn't use any of "Science Companion" books (or something - sorry, I didn't bring the materials home)

From krista maloney to [Everyone](#): 02:16 PM

I agree with Randi!

From Kathy McLaren to [Everyone](#): 02:18 PM

You have to think of those teachers who might not put in the extra effort.

From krista maloney to [Everyone](#): 02:20 PM

I piloted Force and Motion for Foss last year and piloted Force and Motion for NatGeo. Foss was much more engaging

From Steve Holland to [Everyone](#): 02:32 PM

I had to check out 2/3 of my Chromebooks.

From Trisha Wallace to [Everyone](#): 02:33 PM

I wish that was an option. Our kids are just not experienced enough and we don't have enough for everyone anyway.

From Steve Holland to [Everyone](#): 02:33 PM

I know - 3rd and up is developmentally appropriate.

S1. Phenomena/Problems. Materials provide anchoring and investigative phenomena/problems that:

- engage students as directly as possible in authentic and relevant experiences.
- are matched to targeted learning goals.
- can be figured out/solved using scientifically accurate understandings and abilities.
- make connections beyond and to their daily lives including to their homes, neighborhoods, communities, local environment, and/or cultures.

Evidence:

students are front loaded with phenomena

experiments are teacher guided (scripted)

3rd grade - a photo was used as phenomena to introduce the topic but did not go back to that

meet the scientist; follow the scientist throughout the unit

pictures led to a lot of great conversation

Strengths:

great/very rich photographs; phenomena is the imagery

experiment/lesson materials are readily available in the classroom (generally)

Engineering activities are very engaging based on phenomena. Also, more student led (3rd grade)

Weaknesses:

2nd grade - needed additional pictures, videos

S2. Three-dimensional Conceptual Framework. Materials include learning experiences that help students to build scientifically accurate understandings and abilities through opportunities for students to:

- link prior knowledge to negotiated new understanding and abilities.
- do work that approximates the nature of science.
- use reasoning to connect grade-appropriate SEP, DCI, and CCC elements and EP&C's (when applicable).
- ask and answer questions that link learning over time.
- negotiate new understandings and abilities by comparing their ideas, their peers' ideas, and ideas encountered in the learning experience(s).
- apply their understandings and abilities in a variety of ways.

Evidence:

Engineering projects mimic work of scientists, but not the teacher led experiments

Students create their own notebooks

Strengths:

Images, simplicity of investigations and STEM challenges at the end are a strength (8th grade)

Weaknesses:

Nat Geo would not be a good stand alone program

53. Prior Knowledge. Materials leverage students' prior knowledge and experiences to motivate student learning in ways that

- make visible students' prior knowledge and experiences related to the anchoring and investigative phenomena/problems and relevant SEPs, DCs, and CCCs and EP&Cs (when applicable).
- revisit students' early ideas to see how they have changed (or not) as they figure out phenomena/solve problems.
- make explicit links to new ideas and practices being developed by students.

Evidence:

2nd grade - had to provide a lot of front loading; felt like needed additional reading materials

Strengths:

Weaknesses:

Materials did not provide a lot of framework, required supplementing

- S4. Equitable Learning Opportunities:** Materials ensure that **all** students, including those from non-dominant groups and with diverse learning needs, have access to the targeted learning goals and experiences, including:
- appropriate reading, writing, listening, and/or speaking alternatives for students who are English language learners, have special needs, read below the grade level, or have high interest and have already met the intended learning goals.
 - culturally-relevant contexts and examples that support all students.
 - opportunities to cultivate interest and confidence as scientists and engineers for all students.

Evidence:

Potentially since it is easy, more teachers would use the making it accessible to students

Scientists of different cultures are represented

Reading was very supportive (students could watch it being read to them)

Font and layout do not overwhelm students

photographs were very helpful for developing readers

Strengths:

kinder - supports were included for special needs students

Weaknesses:

would like to see more "Science in a Snap", 2nd grade only two experiments in one unit

- 55. Variety of Measures.** Assessments are matched to targeted learning goals and elicit a full range of student thinking by
- providing clear expectations (e.g., rubric) to students so they understand how they can demonstrate their knowledge.
 - using a variety of measures (e.g., performance tasks, discussion questions, constructed response questions, project- or problem-based tasks, portfolios, and justified multiple choice).
 - providing set(s) of tasks so that students can demonstrate their understanding of the same learning goals in multiple ways.

Evidence:	Rubrics: yes or not yet (students self-assess)	multiple choice assessments included	Performance task included for each unit
Strengths:	2nd grade - kids could write or draw; not too wordy	The engineering projects pull a lot of concepts together in a motivating way.	
Weaknesses:			Performance tasks a little weak (Kathy gave paper plate example)

T1. Coherence. Teacher materials describe and provide a rationale for

- the conceptual framework and sequence of ideas, practices, and learning experiences in the learning sequences and across sequences.
- strategies for linking student experiences across lessons to ensure student sense-making and/or problem-solving focused on phenomena or problems is linked to learning across all three dimensions.
- connections to other science domains, nature of science, engineering, technology, and applications of science, math, ELA, and EP&Cs (when applicable).

Evidence:	3rd grade - didn't seem sequential	3rd grade - planning/reading took longer than the lesson itself	2nd grade - hard time finding videos; sometimes videos didn't work (online platform)	kindergarten - easy to navigate; not a lot of content on each page; some problems with video	
Strengths:					
Weaknesses:	Materials required supplementing				

- T2. Effective Teaching. Teacher materials support the use of and provide a rationale and evidence of effectiveness for strategies that
- support students in learning through authentic and meaningful phenomena or design problems
 - support student learning across the three dimensions.
 - make student thinking visible; promote reasoning, sense-making, and problem-solving; challenge student thinking; and develop metacognitive abilities.

writing and argumentation prompts/activities to build on this backbone curriculum. This is both a strength and a weakness - it needs more experimentation/phenomena to go with its gorgeous photographs and

Evidence:

Structures - agree/disagree collaborative strategy, for example, in TE

Kids are drawing and labeling; science notebooks were good

Strengths:

Meaningful design problems - applies research, design, testing, and presentations

Weaknesses:

OPTIONAL T3: Support to Monitor Student Progress. Materials
provide support for teachers to

- monitor student learning and progress over time.
- make decisions about instruction and provide feedback to students.

Evidence:

Strengths:

Weaknesses:
