

MODIFIED QUARANTINE

Students that are considered primary exposure to a positive COVID student may be placed in modified quarantine. This means they may attend school as long as they are asymptomatic. The usual masking and distancing apply. This type of quarantine of a student lasts for 10 days duration. They will need to be quarantine outside of school.

A student that has been exposed to a COVID positive case outside of school and is asymptomatic may attend school with masking and distancing. This does not apply if the student lives in the same setting as a COVID positive individual.
