

ParaEducator Online Training Program addresses paraeducator training and assessment needs in an effective and affordable manner. This CASE-endorsed program contains 120 courses, delivered online, and written exclusively for paraeducators.

ParaEducator Online Training Program ensures that every paraeducator has the basic skills required to be effective in the classroom—and the specific skills necessary to support students with special needs.

The program is delivered in our eLearning Platform—which makes it easy to facilitate training and professional development activities, assign courses, monitor and document each paraeducator’s time-on-task and mastery of the subject matter, and even track PD activities conducted offline.

Each of the **120+ courses** in the ***ParaEducator Online Training Program*** —which will take approximately one hour to complete—contains the following features:

- **Learning objectives** that outline the course content.
- **Short readings and Videos** that teach the lesson and demonstrate the desired outcomes.
- **A 10-question posttest** to verify the participant’s understanding of the lesson. Questions may be true/false, single select, multiple select, sequencing, or matching.
- **5 Knowledge and Application questions** that can be used to facilitate discussion or to submit to administrators for credit.

Some courses also contain practice questions, downloadable resources, and video clips to demonstrate strategies and offer advice from practitioners. After the participant completes a course and passes the posttest, a transcript is automatically generated.

All of the coursework in this program is **research- and evidence-based** and is **written by experts and practitioners**. Documentation is available upon request.

TARGETED TRAINING FOR PARAEDUCATORS

Because paraeducators are typically assigned to support students with diverse learning needs, it’s essential that they have access to specific training that will help them support these diverse learners. With the ***ParaEducator Online Training Program***, paraeducators will have access to coursework on the following topics.
