*\*The "Best If Used By" date is intended to tell you how long the product will retain best flavor or quality. The term is not a safety date. "Best If Used By" dates are intended as useful guidelines. Some foods may deteriorate more quickly and other foods may last longer than the times suggest. A number of factors can shorten the useful life of a food product, such as improper handling and inadequate storage temperatures. The inventory control method of "first-in-first-out" should be practiced by those responsible for managing commodity inventories and distribution to the State and local level. Products kept past the "Best If Used By" dates are not necessarily unusable. Food products may be consumed after the "Best If Used By" date if the product has been properly stored and handled, and the primary container is in good condition.*
