

# Teacher BYOD

## Wifi-

We opened **staffLink** to all staff. With this you can bring personal laptops on campus. When you connect, it will prompt you for your school Windows logon information. Currently this is not restricted to a single device but please be respectful and only connect necessary devices.

**School devices should not be connected to staffLink.**

The internet filtering will be based on whoever's credentials are used to connect, so please be mindful of who will use your connected device. We do not recommend ever letting a student on to staffLink due to the more relaxed filtering. Your school Windows logon information has to be changed every 3 months. **After changing your password on a school device, you must update the password on your staffLink connection.** If not, the device will continue using your old password and can lock you out of the school connected computer.

Depending on the device, it may ask for more than just your school Windows login information or you may need to go into the WiFi settings to change the following options: Ignore/do not validate the certificate, PEAP as the method, and MSCHAPv2 as the authentication. Most devices do not ask for this, but wanted to provide the extra information in the off chance that it does. The IT department can't touch personal devices, but we will assist the best we can with connecting and school based accounts.

## Printing-

Please follow the link below for setting up BYOD printing using mobility print. At the bottom of the website you will find the individual procedures for setting this up depending on the platform you use. Mac OS and iOS are a little different, so please be aware of those. This will only work on **staffLink**. Since this is on a personal device we can't support it, but if you have trouble we can ensure the server is working properly, and that the service for that particular platform is working as it should.

<http://GPSPrintSrv2:9163/setup>

After mobility print is set up, when you print, please choose the Ricoh Printers with the Green box White "P" (for PaperCut) to use mobility printing. At that point it will prompt you to login and there are two ways to accomplish this. Either use school network ID and password, or sign-in with a school Google account. A Google Sign-in is the recommended way, but you can use either. You can then continue to print at any Ricoh copy machine in the district.
