# Remote Dial-In

Overview | Required Setup | Emergency Messaging by Remote Dial-In

## Overview

The Remote Dial-In feature allows an emergency message to be sent to messenger recipients when the Campus application is inaccessible. Administrators need only to call a telephone number and follow a series of prompts to create and send an emergency message.

## Required Setup

The following setup is required for Remote Dial-In capabilities:

- Remote Dial-In functionality requires that the district already use Campus Messenger with Voice and complete the setup steps listed above.
- The district must request Remote Dial-In functionality and it must be enabled by Infinite Campus Hosting staff.
- The person sending the message must have access to a phone and have the ShoutPoint Remote Dial-In phone number/password readily available.

## Emergency Messaging by Remote Dial-In

The Remote Dial-In tool is a ShoutPoint feature that allows emergency messages to be sent to message recipients when the Campus software application is inaccessible. This feature is supported by ShoutPoint.

 This tool is not part of the Campus interface. Campus involvement in this feature is only to provide ShoutPoint a data extract containing recipient contact data.

For information and instructions on use of the Remote Dial-In feature, please see the following user guide, made available by ShoutPoint:
