

Student Success Goals: Guide to ensuring that eStem students are College Ready
Career Ready & World Ready

Each year, a majority of eStem schools will meet or exceed a score of 80.00 on the state-determined Value Added Growth measure used in annual ESSA calculations.

What is value-added growth? Value-Added growth compares how much a student grew this year compared to how much we thought he/she would grow based on their past test performance.

By 2028, students who have attended eStem schools for at least grades 9 through 11 will exceed state (Composite) performance on the 11th Grade state-mandated ACT assessment by at least 0.5 points.

For example, an 11th grade student who has attended eStem since at least the 9th grade, will score at least .5 points better than the state average when they take the state-mandated ACT.

By 2033, at least 90% of students who graduate from eStem High School each year will be accepted to at least one four-year or two-year institution of higher education.

By 2033, the percentage of eStem High graduates who have attended eStem schools for at least grades 9-12 and who actually enroll in a four-year or two-year institution of higher education will meet or exceed the state average for enrollment.

What does this mean? For example, if the state average for enrollment in a four or two year institution of higher learning is 39%, the percentage of students who have attended eStem from 9th grade until graduating AND enroll in a four/two year institution will be at or above 39%.

By 2036, at least 70% of students who have attended eStem schools for two or more years will meet or exceed national student growth norms in reading and/or mathematics on NWEA assessments. This goal will be assessed by examining fall-to-spring growth annually at the 2nd, 5th, and 8th grades.

For example, 70% of 2nd graders, who started at eStem in kindergarten, will meet or exceed the national 2nd grader's average NWEA score when they take their NWEA test in the spring of their 2nd grade year.
