

# Poverty and the Brain

Poverty impacts many students in east central Indiana.. Based largely on Eric Jensen's *Poor Students, Rich Teaching*, this workshop will help educators better understand what is happening with some of their most challenging students. It will also provide tools for how to regulate emotions and behavior, engage the most difficult students, and enhance cognition through long-term memory.

## Session Outcomes:

- Better understanding of how poverty affects students neurologically, physically, behaviorally, & cognitively
- Methods to help teachers remain calm and positive when faced with challenging students
- Procedures to facilitate healing and resilience in students experiencing trauma and poverty
- Strategies to improve student performance, understanding, and achievement
- Exploration of mindsets that support positive healing and growth

Please plan to join us on September 21 for a session that will help you see yourself and your students in new ways.

## DATE:

Friday, September 21, 2018

## SITE:

ECESC

1601 Indiana Avenue

Connersville, IN 47331
