Dear Parent(s)/Guardian(s):

The graphing calculator is an integral tool in learning and applying mathematics in the real world. At the high school level, graphing calculators are valuable tools for all students to increase their level of understanding and tackle the challenges of Algebra I, Geometry, Algebra II and Trigonometry, Pre-Calculus, Calculus, and other math elective courses. Furthermore, the New Jersey Student Learning Standards strongly indicate the need for students to become comfortable in using the graphing calculators as tools in problem-solving, computational and conceptual thinking, and mathematical modeling. Therefore, it is strongly recommended that each student own a graphing calculator for use in all high school mathematics classes. Students will be using the graphing calculators on classroom assessments, on homework assignments, and standardized testing.

The District is suggesting a Texas Instrument TI 84 Plus graphing calculator. This calculator will serve your child through Calculus and into his/her post-secondary education. It is available at local stores such as Staples. The cost of the calculator is approximately \$100.00. If you would like more information about the TI 84 Plus, please visit <https://education.ti.com/en/products/calculators/graphing-calculators/ti-84-plus> If you should have any questions or concerns, please contact me.

Sincerely,

Fay Witkowski
Supervisor of Instruction
