

ASBESTOS REPORTS

Several years ago the U.S. Congress passed legislation which required school buildings be inspected for asbestos content. Asbestos materials which are friable and capable of being suspended in the air can be hazardous to the health of individuals inhabiting the buildings.

Vinyl-asbestos tile is present in Prairie View High School building. This is not friable and will not become suspended in air unless it is removed. The regular scrubbing, sealing and waxing protects it adequately. Custodial employees have been given training about the dangers of asbestos, potentially dangerous areas are identified so that employees, students and patrons will be aware of the designated areas. A complete copy of the report is available in the district office.
