

Considerations for December 21st Virtual Day Student Instruction

K - 8

- Student virtual does NOT mean teachers prepare a lesson students must complete at home on their iPads.
- Google classroom may be utilized if home access is there for students.
- What is recommended is that K-8 students receive an assignment from each of the core areas to complete and return on January 6th.
- Total time required to complete the assignment should not exceed 2 hours (no more than 30 minutes per subject.)
- The assignment can be done on paper and sent home with students.
- The assignment should connect with/support/enrich standards taught in the second quarter. (Not new learning)
- This work should be graded in January with feedback for students.
- The school should send a message to parents explaining the parameters of this student work requirement.

9 - 12

- High schools will need to consider 9-12 student work assignments not by content area but by larger extensions such as ACT skills, extended response writing, certification work, etc.
- Google classroom may be utilized.
