The category weighting percentages change each quarter.

<p><b>60%</b> Heard</p> <p>100 70 + 100 <b>270</b> Total</p>	<p><b>10%</b> Read</p> <p>68 60 + 80 <b>208</b></p>	<p><b>30%</b> Skills</p> <p>88 100 95 + 88 <b>371</b></p>
--	---	---

1. Total the grades for each category

2. Divide the total by the number of grades to calculate a category average.

$270 / 3 = 90$	$208 / 3 = 69.3$	$371 / 4 = 92.8$
----------------	------------------	------------------

3. Convert the category weighting percentage to a decimal. Multiple the decimal by the category average to calculate the category

<p>90 Category Average    <b>69.3</b></p> <p>x .6 = 60% <b>54</b> Points from Heard</p>	<p>69.3 x .1 <b>6.9</b> Points from Read</p>	<p>92.8 x .3 <b>27.8</b> Points from Skills</p>
---	--	---

4. Total the category points to calculate the final average for the quarter

<p>54 Points from Heard 6.9 Points from Read + 27.8 Points from Skills <b>88.8</b> Final Average for Quarter</p>
