Student Technology Online Resources

Every student who attends a school in the Smithville School District is expected to use technology to conduct research, complete curricular objectives, and communicate with others in the educational world. Electronic information use and research skills are fundamental to preparation of citizens and future employees during this age of information. We believe that the benefits to students from the access of electronic information resources and opportunities for collaboration are mandatory in the 21st century.

Access to district technology online resources include but are not limited to:
1. Internet access
2. Wireless and wired computer access
3. Interactive Distance Learning opportunities
4. E-mail
5. WIKIs and Blogs
6. Internet based instructional programs and curriculum such as Tinkercad

<u>Student Opt-Out Policy</u>
Parents or guardians may choose to opt their student out by signing and returning the below form. The signed form will be kept on file. All appropriate staff shall be notified and alternate instructional methods will be implemented where possible. Opt-out requests shall be required annually and are valid only for the school year in which they are submitted.

Thank you,
Technology and Innovation Teachers

I DO NOT want my student to be allowed access to the student technology online resources listed above
