Asbestos Hazard Emergency Response Act (AHERA) Annual Notification of Compliance

To All Parents, Students, and Staff,

This is to inform you that the Asbestos Hazard Emergency Response Act (AHERA) (40 Code of Federal Regulations 76.3) requires Unified School District #312 to inspect its buildings for asbestos, and to develop a management plan for those asbestos-containing materials that were located within its buildings. This initial inspection was completed in March of 1988. The law also requires re-inspecting of these materials every three years.

Each of our school buildings has been inspected for asbestos-containing materials by EPA accredited inspectors. The results of these inspections / re-installations are included in the management plans that are on file in each school's administrative office and at the district's main office.

For further information, please contact the district office during regular business hours.
