

**Title:** **Access/Use of Instructional Technology**

Policy Adopted: The goals and objectives of the District are centered around the belief that public education must prepare its communities for changes in technology and the development of new knowledge, as well as the challenges these changes in society will bring.

Technology will be used where appropriate in all aspects of instruction and management in the District. The goals of the St. Croix Central School District is to create an environment for learning in which technology is a totally integrated part of the education process. An environment where graduates are then prepared to step comfortably into the workplace as well-trained, technology-familiar, productive employees.
