

Section: **STUDENTS**

Policy Title: **Anaphylaxis Prevention and Response**

Anaphylaxis is a life threatening allergic reaction that may involve systems of the entire body. Anaphylaxis is a medical emergency that requires immediate medical treatment and follow-up care by an allergist/immunologist.

The board of directors expects school administrators, teachers and support staff to be informed and aware of life threatening allergic reactions (anaphylaxis) and how to deal with the resulting medical emergencies. For students, some common life threatening allergens are peanuts, tree nuts, fish, bee or other insect stings, latex, and some medications. Affected students require planned care and support during the school day and during school sponsored activities. Additionally, any student could potentially have a life threatening allergic reaction even without a history of such.

Parents/guardians are responsible for informing the school about their student's potential risk for anaphylaxis and for ensuring the provision of ongoing health information and necessary medical supplies. The district will take reasonable measures to avoid allergens for affected students. The district will also make staff aware of anaphylaxis issues and appropriate response to emergencies. Additionally, student specific training will be provided for appropriate personnel.

Even with the district's best efforts, staff and parent/ guardians need to be aware that it is not possible to achieve a completely allergen-free environment. However, the district will take reasonable precautions to reduce the risk of a student with a history of anaphylaxis coming into contact with the offending allergen in school.

The superintendent will establish procedures to support this policy and to ensure:

1. Rescue protocol in cases of suspected anaphylaxis will follow OSPI's *Guidelines for Care of Students with Anaphylaxis (2009)*;
2. A simple and standardized format for emergency care plans is utilized;
3. A protocol is in place to ensure emergency care plans are current and completed;
4. Medication orders are clear and unambiguous;
5. Training and documentation is a priority.
