Official Notification

From Creative Technologies Academy

Dear Parent, Guardian, or Staff Member:

This district practices Integrated Pest Management (IPM), an approach to pest control that reduces pest populations while minimizing pesticide applications. After trying non-chemical means to control a current pest problem, a pesticide has been deemed necessary. On Jan 24, 2020, an application of diatomaceous earth will be applied at the high school, room 202 for the control of ants. We are using diatomaceous earth because it works mechanically opposed to chemically. The application will be over a weekend to minimize exposure. If you have questions please contact Daniel Clark, Operations Director, at 616-263-7172.

Daniel Clark
Operations Director
