Parent Tips of the Week - The Impacts of Screen Time on Students

Electronics are a great thing, however, too much screen time can have negative impacts. Below is 1/6.

[Screen time disrupts sleep and desynchronizes the body clock.](#)

Because light from screen devices mimics daytime, it suppresses melatonin, a sleep signal released by darkness. Just minutes of screen stimulation can delay melatonin release by several hours and desynchronize the [body clock](#). Once the body clock is disrupted, all sorts of other unhealthy reactions occur, such as hormone imbalance and brain inflammation. Plus, high arousal doesn't permit deep sleep, and deep sleep is how we heal.
