Google Chrome Cursor Disappearing Fix

In Google Chrome click the menu button (3 dots in the corner) and then Settings
In settings type accel in the top bar (or type acceleration)
Toggle OFF the top option (so that it is grey and not blue)
***If your cursor is currently missing toggle the second one and it will ask you to refresh chrome but your cursor will be back. If your cursor is not currently missing you can leave it toggled on or off, it doesn't matter.
