

Thank you for your continued patience as we worked to meld the new March 27th guidance from the Illinois State Board of Education with our already approved E-Learning Plan, in an effort to develop and gain approval of our Remote Learning Plan. The purpose of this communication is to outline what Remote Learning will look like and how students will engage in Remote Learning with the support of their teachers and families. Please see the attached Remote Learning Plan for further details. ([Click here](#))

The district is working to increase our students ability to connect to Wi-Fi to complete their Remote Learning activities. In the initial weeks of our Remote Learning we will be providing learning activities from each student's teacher who needs offline materials until we can provide this Wi-Fi access that families need. While we are currently awaiting the arrival of external Wi-Fi access points, we want to make sure that students have the necessary devices to complete their Remote Learning activities. We are hopeful to have these in our possession and installed in the next few weeks. We have also been informed that Xfinity networks no longer require a password for users to access their network. If you happen to be in an area where one of these networks is available to use, you may simply login without password credentials.

We will continue to communicate information with you as it becomes available.

Thank you for your continued support as we work together during this unprecedented time.
