While there is no playbook for an event of this scale and magnitude, we aim to support school leaders and educators at the front lines of the crisis.

Planning for student success in the wake of COVID-19 starts by recognizing that some students are particularly vulnerable when schools close. By tending to their needs, we can ensure all students continue their learning journeys, and the disruptions caused by the pandemic don't exacerbate inequities.

We've created this resource page to supply educators, school leaders, and education policymakers at all levels with helpful resources to navigate the challenges presented by the coronavirus outbreak. They are intended to help school communities prepare for change and to focus on the facts to protect public health, mitigate confusion, prevent panic — and continue teaching and learning.

Our team is actively curating resources, reviewing state plans, and monitoring legislative and policy changes related to coronavirus. Please come back regularly for updates to this list.

What Is Continuity of Learning?

Continuity of learning is an emergency response measure to ensure students can stay on their learning pathways during an interruption, such as a prolonged school closure or absence due to illness, natural disasters, conflicts, or weather events. It is also called continuity of education, instructional continuity, academic continuity, among other terms.
