

#### **East Campus Construction Update**

#### **Finished Projects**

# East Campus summer projects complete

Students at East Campus likely noticed a big difference when school started on Aug. 14. New ceilings and new LED lighting throughout school are just some of the summer projects completed at East Campus. Phase II projects are planned for next summer!

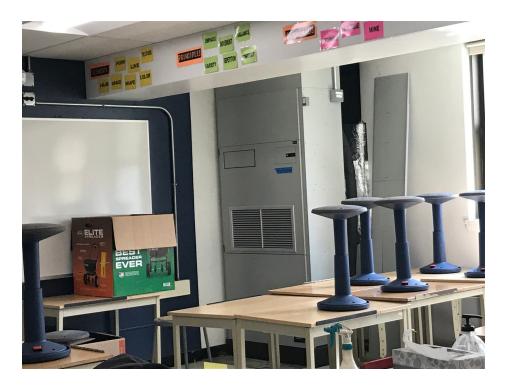

## Quiet is the word

Beyond the brighter inside, another noticeable change at East Campus may be how much classroom noise was eliminated with the new HVAC equipment. The new units are much more quiet.

## New geothermal heating and cooling system

New HVAC units in the classrooms are tied to a new geothermal heating and cooling system under the East Campus parking lot. A series of wells underground use stored energy to provide heating and cooling.

After wells were drilled, the East Campus parking lot was repaved. Except for some valves, you can hardly notice the difference.

### Here is the full list of summer 2019 projects:

- Installation of new geothermal HVAC system in all classrooms and offices
- New classroom ceilings and ducted vents
- New interior and exterior LED lighting throughout the building
- New classroom flooring
- New hot water heaters and water softeners
- New roofing and rooftop HVAC Units
