

Tactile Perception

Have the student look at the objects and know the names of the items that will go in the bag. With both hands the child should find an object, touch it, and try to guess what it is. If they guess it right, they get to "keep" the item.

YOU WILL NEED:

- ☐ Fabric bag
- ☐ Themed Objects
- ☐ Geometric Shapes

Army Shuffle

To improve shoulder and postural stability have the student lie on their belly and move using only their arms to pull their body forward.

Crab Walk

Sit on the floor, put your hands behind you (thumbs facing outward) and walk around using your arms and legs making sure your bottom is off the floor.

Lie on Belly

Students will lie on stomach and prop up to read or watch. This will strengthen their shoulder and postural stability.
