Name: $\qquad$

## Mathematics: The Language of STEM

Exploring Equivalent Fractions: Day 1

## CONTENT AND TASK DECISIONS

## Grade Level(s): 5

## Description of the Task:

Students will use snap cubes to build rectangular prisms in order to discover different ways of representing the same fraction.

## Indiana Mathematics Content Standards:

- 5.C.4: Add and subtract fractions with unlike denominators, including mixed numbers.
- 5.AT.2: Solve real world problems involving addition and subtraction of fractions.

## Indiana Mathematics Process Standards:

- PS1
- PS2
- PS3
- PS4
- PS5
- PS6

## Mathematics Content Goals:

Students will directly model how to form equivalent fractions.

## Language Objectives:

Students will engage effectively in a range of collaborative discussions about equivalent fractions, while posing and responding to specific questions based on the remarks of others.

## Materials:

Snap Cubes
Fraction Puzzles Worksheet

## THE LESSON

## Before:

Student Actions

- Students will work in pairs to build a rectangle that is one third of one color and two-thirds of another color using more than three cubes.
- Students will contribute to the discussion by posing questions to their peers and sharing ideas.

## Teacher Actions

- Show the students a rectangle made of one yellow cube and two blue cubes. Ask, "What fraction of the rectangle is yellow?"
- Ask, "How can you use snap cubes to build a rectangle that is one third of one color and two-thirds of another color using more than three cubes?"
- Circulate among groups to provide assistance and make observations.
- Call on students to share and explain their thinking.

## During:

## Student Actions

- Students will work in pairs to create snap cubes rectangles that represent the following puzzles. They must find as many solutions as possible and draw each solution on grid paper.

## Teacher Actions

- Circulate among groups to provide assistance, pose further questions, and make observations.

## After:

## Student Actions

- Students will contribute to the discussion by posing questions to their peers and sharing ideas.
- Student exit ticket: What patterns did you notice when creating solutions to these puzzles?
- Note: Students will need to keep their grid paper for the next day's lesson.

## Teacher Actions

- Lead the class in a discussion. Call on several groups to share their solutions to one of the puzzles, using the following prompts:
- How did you go about solving this problem?
- Which solution best illustrates the puzzle? Why?

ASSESSMENT
(student exit ticket): What patterns did you notice when creating solutions to these puzzles?

## Observe:

- Observe students making the connection between two fractions that have different numerators and denominators but have the same value.
- Observe students engaging effectively in a range of collaborative discussions about equivalent fractions, while posing and responding to specific questions based on the remarks of others.

## Fraction Puzzles

Fraction Puzzle \#1
This rectangle is $1 / 2$ blue and $1 / 4$ yellow. The rest of the rectangle is black. Use your cubes to build as possibilities that you can think of. Draw them in the grid paper below.

Fraction Puzzle \#2
This rectangle has 12 cubes. Three are blue, $1 / 4$ are black, and $1 / 6$ are yellow. Use your cubes to build as many as possible. Draw them in the grid paper below.

Fraction Puzzle \#3
This rectangle is $3 / 8$ blue and $1 / 4$ yellow. The rest of the rectangle is black. Use your cubes to build as many as possible. Draw them in the grid paper below.

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

Fraction Puzzle \#4
This rectangle is $3 / 5$ blue. The rest is black and yellow but not in equal amounts. Use your cubes to build as many as possible. Draw them in the grid paper below.

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## Mathematics: The Language of STEM

Exploring Equivalent Fractions: Day 2

## CONTENT AND TASK DECISIONS

## Grade Level(s): 5

## Description of the Task:

- Students will present their multiplication patterns from yesterday's activity in a table.
- Students will use manipulatives of their choice to solve the problem and present their findings to the class.

## Indiana Mathematics Content Standards:

- 5.C.4: Add and subtract fractions with unlike denominators, including mixed numbers.
- 5.AT.2: Solve real world problems involving addition and subtraction of fractions.

## Indiana Mathematics Process Standards:

- PS1
- PS2
- PS3
- PS4
- PS5
- PS6

## Mathematics Content Goals:

Students will use multiplication strategies to form equivalent fractions and apply their strategies to solve an addition problem involving fractions.

## Language Objectives:

Students will engage effectively in a range of collaborative discussions about equivalent fractions, while posing and responding to specific questions based on the remarks of others.

## Materials:

Snap Cubes
Fraction Puzzles Worksheet

## THE LESSON

## Before:

## Student Actions

- Students will work in the same pairs from yesterday to create a table showing the number of cubes for each color in fraction puzzle \#1. See example below:

| Blue cubes | 2 | 4 | 8 |
| :--- | :--- | :--- | :--- |
| Yellow cubes | 1 | 2 | 4 |
| Black cubes | 1 | 2 | 4 |
| Total cubes | 4 | 8 | 16 |

- Use the table to show the three equivalent fractions represented by the number of blue cubes.
$2 / 4=4 / 8=8 / 16=$ $\qquad$

## Teacher Actions

- Ask students to look over their grid paper from yesterday.
- Ask "What did you notice about the rectangles you built yesterday?"
- "When building a fraction what did the bottom number represent?"
- "What did the top number represent?"
- Teacher will use the first rectangle from yesterday (2 blue, 1 yellow, 1 black cubes) to show students how to fill in the table.
- Allow time for students to continue filling in the table for the remaining rectangles from yesterday's lesson.
- Teacher will circulate the room, checking to make sure groups are completing the table correctly
- "What do we know about all of these rectangles?"
- "What patterns do you see?"

## During:

## Student Actions

- Students will work in the same pairs to use manipulatives to solve and model the following problem:
- Sandy and Lisa are sharing a pizza at a sleepover. Sandy ate $1 / 2$ of the pizza and Lisa ate $1 / 3$ of the pizza. How much pizza did they eat all together? How much is left?

## Teacher Actions

- Circulate among groups to provide assistance, pose further questions, and make observations.
- Provide enrichment for students who grasp the concept quickly. (Draw a model and show your thinking using a number sentence) (Can you do that problem in another way?)

## After:

## Student Actions

- Students will contribute to the discussion by posing questions to their peers and sharing ideas.
- Students will complete their exit ticket independently.

## Teacher Actions

- Lead the class in a discussion. Call on several groups to share their models and solutions on the document camera. (Consider ordering presenters by level of understanding-least to most.)
- How did you go about solving this problem?
- Why couldn't you add the fractions the way they were written?
- Who ate more pizza?
- Justify your answer.

## ASSESSMENT

(student exit ticket): Add $2 / 5+1 / 4$ on a notecard. Explain the strategy you used to solve the problem.

## Observe:

- Observe students forming multiplication patterns to form equivalent fractions.
- Observe students using equivalency concepts to add unlike fractions.
- Observe students engaging effectively in a range of collaborative discussions about equivalent fractions, while posing and responding to specific questions based on the remarks of others.
