## **Asbestos**

### **“Management Plan Location and Availability”**

This is to give you an update of our compliance with the Federal Government law requiring the Asbestos Emergency Response Act. This act requires all school districts to inspect each of their school buildings for asbestos-containing materials. Management plans are then developed which outline how any asbestos will be handled in each school.

Our asbestos inspection has identified asbestos containing materials within our facility. The handling and containment of these materials has been incorporated into our management plan. These materials are incased and pose no threat to the safety of anyone in the building. Any interested parties may review the Asbestos Inspection Management Plan in the office.

The School District is committed to maintaining a safe and healthy learning environment for all children and employees in our school. We will continue, as we have in the past, to monitor, inspect, and repair any materials containing asbestos.

If you would like more information regarding the AHERA program, please do not hesitate to stop by the office.

Sincerely,  
Mr. Rowehl  
Buildings and Grounds
