

SHOULD MY STUDENT GO TO SCHOOL TODAY?

Keeping sick kids home from school is important for their own health and for preventing the spread of illness.

1 FEVER

A temperature of 100.4 degrees or higher is considered a fever and your child should stay home. Please take your child's temperature every morning before he/she gets on the bus or before you leave your house headed to the school.

2 COLD SYMPTOMS

If your child has a cough that doesn't improve or he/she has trouble breathing, keep him/her home from school AND see your doctor immediately. A runny nose with no other symptoms is acceptable for your child to attend school today.

3 SORE THROAT

If your child complains of a sore throat and his/her throat is red or had white patches, keep him/her home from school AND see your doctor as soon as possible.

4 VOMITING AND DIARRHEA

If your child is vomiting or having diarrhea, he/she should not be sent to school for the day. He/she should be symptom-free for at least 24 hours from vomiting and diarrhea before he/she returns to school.

5 EYE TROUBLE

If your child has excessive eye discharge, please check with his/her pediatrician before sending him/her to school.

6 LETHARGY/PERSONALITY

If your child has personality changes, doesn't seem like himself/herself, has no appetite, and seems to be too fatigued to participate in school activities, you should keep him/her home. You should also schedule an appointment with your primary care doctor.
