

Step 1: go to App store and download TCP MobileClock as shown below.

Step 2: Once downloaded, you will see this screen. Do not enter anything just click manual setup.

Step 3: You will see this screen next. Fill it in exactly as I did below... then click next.

Step 5: You will see this screen, click next and then click allow push notifications.

Step 6: the last screen will ask you to enter your ID, which is the same as your employee number. You are now ready to clock in/out as you normally do.
