Guiding Principles

1. Create a timeless visual image that is colorful, bright and energetic, making the school building inviting and safe at the same time.

2. Design a classical building that makes the community proud and has historical relevance.

3. Make the project a great investment for the community by being fiscally responsible.

4. Provide shared collaboration spaces for individuals or groups that create connectivity to adjacent classrooms and are flexible and adaptable for multi-purpose activities.

5. Consider the needs of young children with a facility that is age-appropriate and provides easy access to open learning spaces that include restrooms and water.

6. Provide flexible learning environments to suit multiple purposes that respond to current teaching needs, with multiple fronts and seamless technology throughout.

7. Develop professional space for faculty and staff to encourage teaming, collaboration and interaction, and include large areas for storage and workspace.
