Validate Assignments

Assignment validation verifies assignments that are aligned to multiple sections or that have multiple scoring alignments. This process occurs automatically when needed, but you can trigger it from the Assignments List. Because validation is an automatic process, teachers usually don't need to initiate it manually but may need to do so at the request of Campus Support.

To manually validate assignments, click Validation Assignment and then Continue.

Examples that Prompt Validation

- Changes to the scheduling of sections in a course, such as adding a section.
- If a teacher aligned an assignment to two sections and then that teacher was removed from one of those sections, the validation process splits the assignment so that each section has a unique instance.
- If two assignments in a section are identical except for scoring alignments, the validation process combines those assignments into one with multiple alignments.
