Exit Ticket Packet

Name _____

Date _____

Lesson 1: Percent

Exit Ticket

1. Fill in the chart converting between fractions, decimals, and percents. Show work in the space provided.

Fraction	Decimal	Percent
$\frac{1}{8}$		
	1.125	
		$\frac{2}{5}\%$

2. Using the values from the chart in Problem 1, which is the least and which is the greatest? Explain how you arrived at your answers.

Name _____

Date _____

Lesson 4: Percent Increase and Decrease

Exit Ticket

Erin wants to raise her math grade to a 95 to improve her chances of winning a math scholarship. Her math average for the last marking period was an 81. Erin decides she must raise her math average by 15% to meet her goal. Do you agree? Why or why not? Support your written answer by showing your math work.

Name _____

Date _____

Lesson 8: Percent Error Problems

Exit Ticket

1. The veterinarian weighed Oliver's new puppy, Boaz, on a defective scale. He weighed 36 pounds. However, Boaz weighs exactly 34.5 pounds. What is the percent of error in measurement of the defective scale to the nearest tenth?
2. Use the π key on a scientific or graphing calculator to compute the percent of error of the approximation of π , 3.14, to the value π . Show your steps, and round your answer to the nearest hundredth of a percent.
3. Connor and Angie helped take attendance during their school's practice fire drill. If the actual count was between 77 and 89, inclusive, what is the most the absolute error could be? What is the most the percent error could be? Round your answer to the nearest tenth of a percent.

Name _____

Date _____

Lesson 9: Problem Solving When the Percent Changes

Exit Ticket

Terrence and Lee were selling magazines for a charity. In the first week, Terrance sold 30% more than Lee. In the second week, Terrance sold 8 magazines, but Lee did not sell any. If Terrance sold 50% more than Lee by the end of the second week, how many magazines did Lee sell?

Choose any model to solve the problem. Show your work to justify your answer.

Name _____

Date _____

Lesson 10: Simple Interest

Exit Ticket

1. Erica's parents gave her \$500 for her high school graduation. She put the money into a savings account that earned 7.5% annual interest. She left the money in the account for nine months before she withdrew it. How much interest did the account earn if interest is paid monthly?

2. If she would have left the money in the account for another nine months before withdrawing, how much interest would the account have earned?

3. About how many years and months would she have to leave the money in the account if she wants to reach her goal of saving \$750?

Name _____

Date _____

Lesson 11: Tax, Commissions, Fees, and Other Real-World Percent Problems

Exit Ticket

Lee sells electronics. He earns a 5% commission on each sale he makes.

- Write an equation that shows the proportional relationship between the dollar amount of electronics Lee sells, d , and the amount of money he makes in commission, c .
- Express the constant of proportionality as a decimal.
- Explain what the constant of proportionality means in the context of this situation.
- If Lee wants to make \$100 in commission, what is the dollar amount of electronics he must sell?

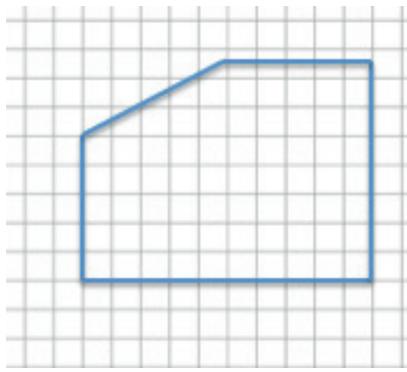

Name _____

Date _____

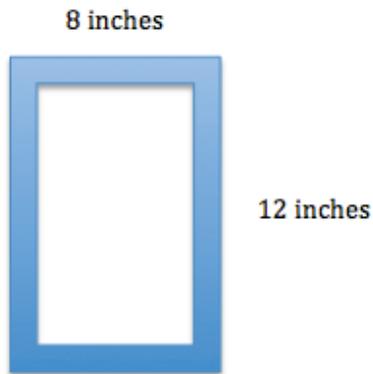

Lesson 12: The Scale Factor as a Percent for a Scale Drawing

Exit Ticket

1. Create a scale drawing of the picture below using a scale factor of 60%. Write three equations that show how you determined the lengths of three different parts of the resulting picture.

2. Sue wants to make two picture frames with lengths and widths that are proportional to the ones given below.
Note: The illustration shown below is not drawn to scale.

- a. Sketch a scale drawing using a horizontal scale factor of 50% and a vertical scale factor of 75%. Determine the dimensions of the new picture frame.
- b. Sketch a scale drawing using a horizontal scale factor of 125% and a vertical scale factor of 140%. Determine the dimensions of the new picture frame.

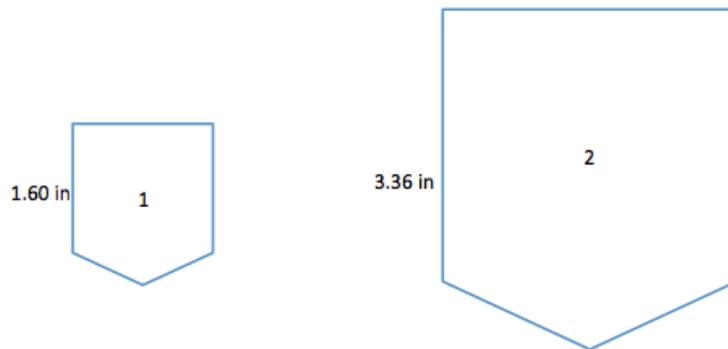

Name _____

Date _____

Lesson 13: Changing Scales

Exit Ticket

1. Compute the scale factor, as a percent, for each given relationship. When necessary, round your answer to the nearest tenth of a percent.

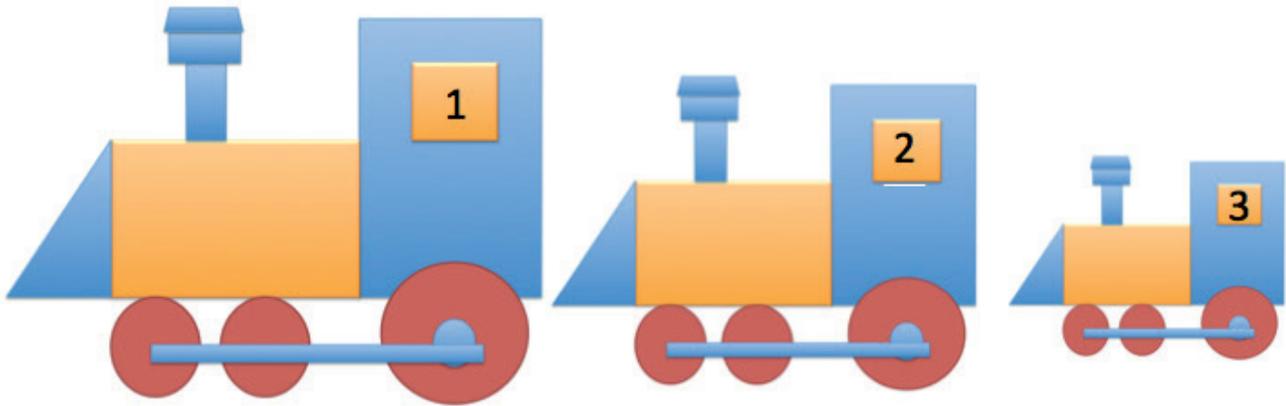

- a. Drawing 1 to Drawing 2

- b. Drawing 2 to Drawing 1

- c. Write two different equations that illustrate how each scale factor relates to the lengths in the diagram.

2. Drawings 2 and 3 are scale drawings of Drawing 1. The scale factor from Drawing 1 to Drawing 2 is 75%, and the scale factor from Drawing 2 to Drawing 3 is 50%. Find the scale factor from Drawing 1 to Drawing 3.

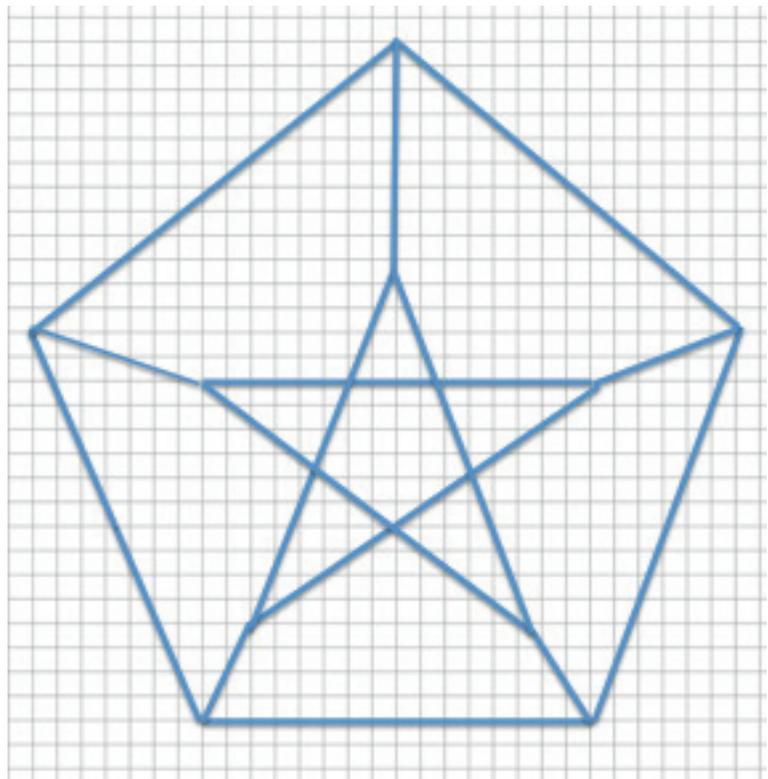

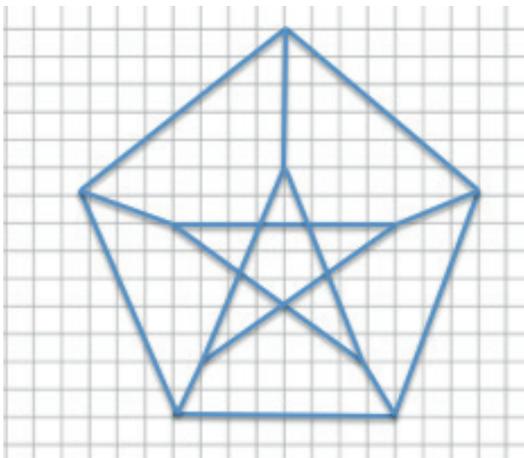

Name _____

Date _____

Lesson 14: Computing Actual Lengths from a Scale Drawing

Exit Ticket

Each of the designs shown below is to be displayed in a window using strands of white lights. The smaller design requires 225 feet of lights. How many feet of lights does the enlarged design require? Support your answer by showing all work and stating the scale factor used in your solution.

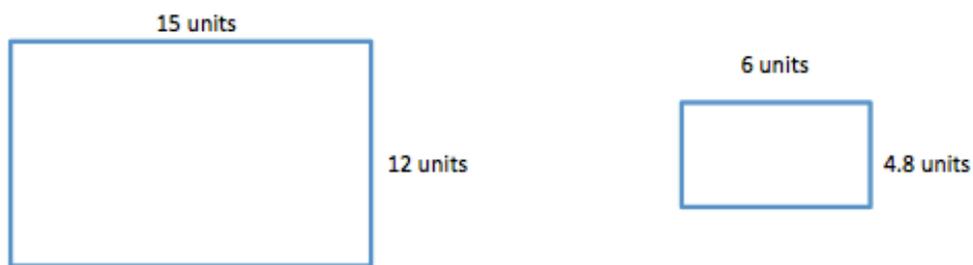

Name _____

Date _____

Lesson 15: Solving Area Problems Using Scale Drawings

Exit Ticket

Write an equation relating the area of the original (larger) drawing to its smaller scale drawing. Explain how you determined the equation. What percent of the area of the larger drawing is the smaller scale drawing?

Name _____

Date _____

Lesson 17: Mixture Problems

Exit Ticket

A 25% vinegar solution is combined with triple the amount of a 45% vinegar solution and a 5% vinegar solution resulting in 20 milliliters of a 30% vinegar solution.

1. Determine an equation that models this situation, and explain what each part represents in the situation.

2. Solve the equation and find the amount of each of the solutions that were combined.

Name _____

Date _____

Lesson 18: Counting Problems

Exit Ticket

There are a van and a bus transporting students on a student camping trip. Arriving at the site, there are 3 parking spots. Let v represent the van and b represent the bus. The chart shows the different ways the vehicles can park.

- a. In what percent of the arrangements are the vehicles separated by an empty parking space?

	Parking Space 1	Parking Space 2	Parking Space 3
Option 1	V	B	
Option 2	V		B
Option 3	B	V	
Option 4	B		V
Option 5		V	B
Option 6		B	V

- b. In what percent of the arrangements are the vehicles parked next to each other?

- c. In what percent of the arrangements does the left or right parking space remain vacant?

Assessment Packet

- d. Graph the relationship from parts (b) and (c) in the coordinate plane. Include a title and appropriate scales and labels for both axes.

- e. Is the relationship proportional? Why or why not? If so, what is the constant of proportionality? Explain.

- f. In nearby Wyoming County, the sales tax rate is 8%. If you were to create an equation, graph, and table for this tax rate (similar to parts (b), (c), and (d)), what would the points $(0, 0)$ and $(1, 0.08)$ represent? Explain their meaning in the context of this situation.
- g. A customer returns an item to a toy store in Wyoming County. The toy store has another location in Allegany County, and the customer shops at both locations. The customer's receipt shows \$2.12 tax was charged on a \$24.99 item. Was the item purchased at the Wyoming County store or the Allegany County store? Explain and justify your answer by showing your math work.

2. Amy is baking her famous pies to sell at the Town Fall Festival. She uses $32\frac{1}{2}$ cups of flour for every 10 cups of sugar in order to make a dozen pies. Answer the following questions below and show your work.
- Write an equation, in terms of f , representing the relationship between the number of cups of flour used and the number of cups of sugar used to make the pies.
 - Write the constant of proportionality as a percent. Explain what it means in the context of this situation.
 - To help sell more pies at the festival, Amy set the price for one pie at 40% less than what it would cost at her bakery. At the festival, she posts a sign that reads, "Amy's Famous Pies—Only \$9.00/Pie!" Using this information, what is the price of one pie at the bakery?

- b. Find the actual total of the bill including tax and tip. If Kacey and her three friends split the bill equally, how much will each person pay including tax and tip?
3. Cool Tees is having a Back to School sale where all t-shirts are discounted by 15%. Joshua wants to buy five shirts: one costs \$9.99, two cost \$11.99 each, and two others cost \$21.00 each.
- a. What is the total cost of the shirts including the discount?

- b. By law, sales tax is calculated on the discounted price of the shirts. Would the total cost of the shirts including the 6.5% sales tax be greater if the tax was applied before a 15% discount is taken, rather than after a 15% discount is taken? Explain.
- c. Joshua remembered he had a coupon in his pocket that would take an additional 30% off the price of the shirts. Calculate the new total cost of the shirts including the sales tax.
- d. If the price of each shirt is 120% of the wholesale price, write an equation and find the wholesale price for a \$21 shirt.

4. Tierra, Cameron, and Justice wrote equations to calculate the amount of money in a savings account after one year with $\frac{1}{2}\%$ interest paid annually on a balance of M dollars. Let T represent the total amount of money saved.

Tierra's Equation: $T = 1.05M$

Cameron's Equation: $T = M + 0.005M$

Justice's Equation: $T = M(1 + 0.005)$

- a. The three students decided to see if their equations would give the same answer by using a \$100 balance. Find the total amount of money in the savings account using each student's equation. Show your work.
- b. Explain why their equations will or will not give the same answer.

5. A printing company is enlarging the image on a postcard to make a greeting card. The enlargement of the postcard's rectangular image is done using a scale factor of 125%. Be sure to show all other related math work used to answer the following questions.
- Represent a scale factor of 125% as a fraction and decimal.
 - The postcard's dimensions are 7 inches by 5 inches. What are the dimensions of the greeting card?
 - If the printing company makes a poster by enlarging the postcard image, and the poster's dimensions are 28 inches by 20 inches, represent the scale factor as a percent.

- d. Write an equation, in terms of the scale factor, that shows the relationship between the areas of the postcard and poster. Explain your equation.
- e. Suppose the printing company wanted to start with the greeting card's image and reduce it to create the postcard's image. What scale factor would they use? Represent this scale factor as a percent.

- f. In math class, students had to create a scale drawing that was smaller than the postcard image. Azra used a scale factor of 60% to create the smaller image. She stated the dimensions of her smaller image as $4\frac{1}{6}$ inches by 3 inches. Azra's math teacher did not give her full credit for her answer. Why? Explain Azra's error, and write the answer correctly.

Name _____

Date _____

DAY TWO: CALCULATOR INACTIVE

You will now complete the remainder of the assessment without the use of a calculator.

6. A \$100 MP3 player is marked up by 10% and then marked down by 10%. What is the final price? Explain your answer.
7. The water level in a swimming pool increased from 4.5 feet to 6 feet. What is the percent increase in the water level rounded to the nearest tenth of a percent? Show your work.
8. A 5-gallon mixture contains 40% acid. A 3-gallon mixture contains 50% acid. What percent acid is obtained by putting the two mixtures together? Show your work.
